

VISION

Explore situations where visual information is difficult or impossible to perceive.

What does the design require people to see?

Think about colour, contrast, size, layout and visual cues.

HEARING

Explore situations where sound or speech is difficult or impossible to perceive.

What does the design require people to hear?

Think about speech, alerts, audio cues and background sound.

MOTOR

Explore situations where physical interaction, precision or movement is difficult.

What does the design require people to reach, hold, move or control?

Think about input methods, strength, precision and repeated actions.

COGNITIVE

Explore situations where information is difficult to understand, process or act on.

What does the design require people to understand, process or decide?

Think about complexity, choices, instructions and predictability.

MEMORY

Explore situations where remembering information, actions or previous steps is difficult.

What does the design require people to remember?

Think about instructions, passwords, previous choices and multi-step tasks.

ATTENTION

Explore situations where directing, maintaining or returning attention is difficult.

What does the design require people to notice or stay focused on?

Think about distractions, interruptions, competing information and orientation.

LANGUAGE

Explore situations where written or spoken language creates a barrier.

What does the design require people to read, understand or express?

Think about vocabulary, fluency, instructions and communication.

PACE

Explore situations where more time is needed to perceive, understand or act.

What does the design require people to do within a limited time?

Think about timeouts, speed, deadlines and time pressure.

GAPPLINGS

Perspective tools for accessible design.

Gapplings help you explore how products, services and environments can create barriers for people with different functional needs.

Each Gappling offers a perspective for questioning what a design requires and finding opportunities to remove barriers.

Functional needs may be permanent, temporary or situational.

DESIGN FOR BARRIERS

A social model perspective

Gapplings use a social model perspective: barriers emerge through the interaction between people and environments, technologies, products and processes.

Functional needs may be permanent, temporary or situational.

CHOOSE

Choose a Gappling deliberately.

Use its perspective to explore a feature, task, journey or experience.

Where are the barriers, and what could you change?

DRAW

Shuffle the Gapplings and draw one at random.

Use the unexpected perspective to challenge assumptions and look at the design differently.

What do you notice that you did not notice before?

ASSIGN

Give different Gapplings to different people.

Explore the same design from several perspectives, then compare what each person noticed.

Where do your findings overlap or differ?

CHALLENGE

Take a Gappling through a scenario, task or user journey.

At each step, ask what the design requires from that perspective.

Where do barriers appear?

CREATE

Use Gapplings to create your own activity, workshop or game.

Combine them with scenarios, tasks, technologies, roles or constraints.

Choose perspectives deliberately — or introduce them at random.

ADD A PERSPECTIVE

Name:

Explore situations where...

What does the design require people to...?

ADD A PERSPECTIVE

Name:

Explore situations where...

What does the design require people to...?

ADD AN ACTIVITY

Name:

What is the purpose?

How does it work?

GAPPLINGS — ESKE TIL KORTSTOKKEN

Mal · A4 · brettes og limes · tilpasset 63×88 mm kort, ca. 18 kort

Slik setter du sammen esken

1. Klipp langs de heltrukne linjene, brett langs de stiplede.
2. Brett rundt til et rør og lim den grå klaffen bak innsiden av front-panelet.
3. Brett bunnklaffene innover — først sidene, så baksiden, så fronten — og lim fronten ned til slutt.
4. Lokket (den lange klaffen fra baksiden) brettes ned over åpningen og tres ned foran kortene. Bruk hakket til å dra det opp igjen.
